

Knowing
+ Understanding
= Saving

Kamstrup smart meters raise energy awareness

December 2009

Knowing – Understanding – Saving

Measuring and documenting energy consumption is the foundation of energy savings. With this focus Kamstrup meets the climate change challenge with high technology solutions.

Kamstrup provides flexible and robust solutions that enable precise, easy and smart metering of energy consumption.

Our solutions

Smart meters for electricity, heat, cooling and water; information gateways and communication infrastructure for metering; data collection; data management; analysis and surveillance of energy consumption.

Why energy metering must be smart

- Smart metering provides information of how much energy was consumed, when it was consumed and at what tariff.
- Smart metering allows energy suppliers to balance demand and supply of energy and run business better.
- Smart metering lets consumers understand their energy consumption.
- Smart metering empowers consumers to change their behaviour towards sustainable consumption patterns.

About Kamstrup

Kamstrup is a high tech company and among the leading manufacturers of solutions for metering heat, cooling, electricity, tap water and natural gas. Solutions include hardware, software, operation and support within the area of metering, automatic data management (AMR/AMM), analysis and surveillance of energy consumption.

Kamstrup serves energy and utility companies with long-term stable technology that enables simple and cost effective metering, collection and management of energy consumption data.

Kamstrup is a global player with a strong international position and representations in more than 50 countries. Headquartered in Denmark, Kamstrup carries a highly skilled workforce of researchers and developers and a fully-automated production plant.

Relations to customers and partners are based on reliability, high quality, long term co-operation and the firm belief that every idea can be improved on.
