

About Kamstrup

As a world leading supplier of intelligent metering solutions, we help energy, electricity and water providers around the world to deliver more efficient, secure and flexible ways to measure and manage consumption.

The data our solutions provide enables utilities to make informed, evidenced-based business decisions, helping them to protect existing revenues and create new sources of value across the supply chain.

Our solutions include consumption meters, grid sensors, smart metering systems, hosting and services, analytics and smart grid applications.

Technological leadership coupled with deep customer insight and understanding has propelled Kamstrup to the forefront of the advancement of intelligent metering solutions within four customer segments; heating, cooling, water and electricity.

From the outset, we provide our customers with a team of the brightest visionary minds in the industry from across our development, engineering, project management and sales teams who work together to deliver an integrated service to each and every partner. This enables us to provide seamless and uninterrupted support and service throughout the full life cycle of a solution.

All of our solutions are produced in our fully automated manufacturing facilities at our headquarters in Denmark and our location in the US. Our solutions come with the highest certifications for quality, security and environmental safety. At the same time all meters are tested individually.
